LATEST NEWS

TEAMWORK MAKES THE DREAM WORK

We are thrilled to have been recognised for a **Gazelle Award** from Dagbladet Børsen, the Danish Business newspaper.

For the past 28 years Børsen has been honouring Denmark's fastest growing companies with its annual Gazelle Awards in recognition of the companies that through their performance, it believes, are role models for *'job creation, optimism and creativity in Denmark.'*

Based on factual criteria such as revenue, turnover, growth and operating profit this prestigious award is an indication to all at Netcare International that we are definitely heading in the right direction.

We thank ALL members of the team and look forward to sharing some pictures and further news next month after the award ceremony.

PASSION DRIVES PARTNERSHIP SUCCESS

We are delighted to announce an exciting new partnership with Crayon to help drive significant growth and higher exposure in the market as we introduce our products to the world of document management systems.

With so much rapid expansion going on in the company including a re-launch of *The Elephant* to a cloud based front-end solution for SAP as well as the approval for our *Document Collaboration Hub (DCH)* we found an essential need for a partner who understood our products and how to effectively push them to market.

Following an introduction from Microsoft, Crayon's expertise in optimising cloud spend has already created significant cost savings

"Crayon helped Netcare receive better support and restructured their Microsoft Azure subscriptions and tenant billing arrangements. Our experts also provided an improved solution for the Microsoft Partner Center. We are now migrating their resources from Pay-as-you-go to a Cloud Solution Partner agreement and scaling for full production."

Daiana Agav,
Azure Business Development
Manager at Crayon

NEW STRATEGY

We are currently working together on a joint go-to-market campaign to ensure we penetrate the market in the most efficient and risk free way.

Finn Schnohr, Founder and CEO at Netcare sums it up perfectly *"We've been part of the industry for 25 years, yet few people have heard of what we do. So, I realized this next adventure requires a partner that provides what we can't."*

There are exciting times ahead and Netcare are delighted with this new partnership.

DATA CONSOLIDATION

Working with our clients ensures that we achieve the best results for them.

Our TREX support team have assisted Vestas in consolidating their data systems.

Vestas

Working together with our clients to optimise their working practices is where we thrive and our TREX experts have been doing just that with Vestas over the last two years. In addition to the everyday support we offer such as monitoring of systems, rapid alerts of any problems and investigations and providing solutions for any legacy issues the biggest success to date has surely been the **Server Consolidation** project that has had a huge impact on company-wide, fast access to unified data systems.

With a number of separate content servers being used by the company data access was slow and not always consistent in content and so the decision was taken to migrate 17 terabytes of data and consolidate it to Microsoft Azure Cloud. This one, unified solution ensured all information was not only simple to retrieve but everyone was sure they were using the exact same information.

Of course just as important as the migration was the need to ensure work carried on as normal and that downtime was kept to an absolute minimum. This too was a huge success.

It is fantastic what can be achieved when all sides pull together and we look forward to assisting Vestas with more projects in the future.
